CMOS IC

QUADRUPLE BUS BUFFER GATES WITH 3-STATE OUTPUTS

■ DESCRIPTION

The **U74AHCT126** are quadruple bus buffer gates featuring independent line drivers with 3-state outputs. When OE is low, the nY outputs are in a high-impedance state. When OE is high, the device passes noninverted data from the nA input to its nY output.

To ensure the high-impedance state during power up or power down, OE should be tied to GND through a pull-down resistor; the minimum value of the resistor is determined by the current-sourcing capability of the driver.

■ FEATURES

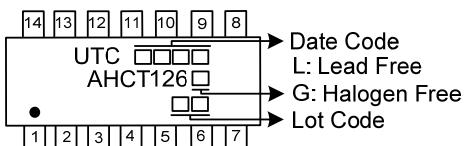

- * TTL-Voltage compatible
- * Max t_{PD} of 7.5 ns from A to Y at $V_{CC} = 5V$, $C_L = 50pF$
- * Low power consumption, $I_{CC} = 2\mu A$ (Max) at 5.5V
- * $\pm 8mA$ output driver at 5V

Notes: 1. Absolute maximum ratings are those values beyond which the device could be permanently damaged.

Absolute maximum ratings are stress ratings only and functional device operation is not implied.

2. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.2.
